US-10-449-902-7723/c
Sequence 7723, Application US/10449902
Publication No. US20060123505A1
GENERAL INFORMATION:
APPLICANT: National Institute of Agrobiological Sciences.
APPLICANT: National Institute of Physical and Chemical Research.
APPLICANT: The Institute of Physical and Chemical Research.
APPLICANT: Foundation for Advancement of International Science.
TITLE OF INVENTION: FULL-LENGTH PLANT cDNA AND USES THEREOF
FILE REFERENCE: MOA-A0205Y1-US
CURRENT APPLICATION NUMBER: US/10/449,902
CURRENT FILING DATE: 2003-05-29
PRIOR APPLICATION NUMBER: JP 2002-203269
PRIOR FILING DATE: 2002-05-30
PRIOR FILING DATE: 2002-05-30
PRIOR APPLICATION NUMBER: JP 2002-383870
PRIOR FILING DATE: 2002-05-31
SEQ ID NOS: 56791

```

clones contain inserts that appear to be highly homologous to sequences from salmonoid fishes, as determined by homology comparisons using BLAST and by Southern hybridization analysis to genomic DNA from salmon (Sigma Chemical Co., St. Louis, MO) under stringent washing conditions. The remainder of the clones appear to contain S. japonicum sequences."

/note="Vector: Lambda ZaP-II XR.; Site_l: EcoR I; Site_2:
Xhol I; Several hundred adult Schistosoma japonicum
(Anhui, P.R. China, strain), of mixed sex, were perfused
from the mesenteries of experimentally infected mice and
rabbits at the Queensland Institute of Medical Research,
Brisbana, Australia (QIMR), and stored for several months
in liquid nitrogen. Subsequently, mRNA was isolated at the
QIMR from lysates of these worms by oilgo dT
chromatography, using a kit from pharmacia. The mRNA was
then shipped to Clontech, Palo Alto, CA, USA, who
constructed a cDNA library. First strand synthesis was
then shipped to Clontech, Palo Alto, CA, USA, who
constructed a cDNA library. First strand synthesis was
primed with an oilgo-dT-XhoI-primer and synthesis was
accomplished with RNAse H and T4 DNA polymerase. The
double stranded cDNA was ligated to EcoRI linkers,
digested with EcoRI and XhoI, and ligated into the
phagemid vector lambda ZAP II XR. After construction of
this directional library by Clontech, it was returned to
the QIMR. During analysis of the library at the QIMR, we
have found that a small percentage, 2% to 3%, of the
clones contain inserts that appear to be highly homologous
to sequences from salmonoid fishes, as determined by
homology commarisons using BLAST and by Southern
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      86-21-50801922
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Genet. 35 (2), 139-147 (2003)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              homology comparisons using BLAST and by Southern hybridization analysis to genomic DNA from salmon (Sigma Chemical Co., St. Louis, MO) under stringent washing conditions. The remainder of the clones appear to contain S. japonicum sequences."

                                                                                                                                                                                                               phosphate.

CATALYTIC ACTIVITY: Myo-inositol hexakisphosphate + H(2)0 = 1D-
                                                                                                                                                                                                                                 Struct. Biol. 7:108-113(2000).
CATALYTIC ACTIVITY: A phosphate monoester +
                                                                                                                                                                                                                                                                                                                                  Etten R.L.;
                                                                                                                                            aerobic to anaerobic conditions.
SIMILARITY: Belongs to the histidine acid phosphatase family.
                                                                                                                                                    SUBCELLULAR LOCATION: Periplasmic.

INDUCTION: In addition to CAMP-mediated control, this enzy induced when bacterial cultures reach stationary phase; it synthesis is triggered by phosphate starvation or a shift serobic to anaerobic conditions.
                                                                                                                                                                                                 myo-inositol 1,2,3,4,5-pentakisphosphate SUBUNIT: Monomer.
